NIRMAYEE S. KADAM PRN-25070521134 SECTION-C1

EXPERIMENT-10.1.1 REMOVE PUNCTUATIONS FROM A STRING

ALGORITHM:

1.Start

2.Input the string

Read a string from the user and store it in a variable X.

3.Initialize a new string

Create an empty string Y = "" to store the result after removing punctuation.

4.Traverse the string

Take each character i from the string X one by one using a loop.

5.Check character type

For each character i, check:

6.If it is a letter (A–Z or a–z)

OR a digit (0–9)

OR a space

7.Condition check

If the character satisfies the above condition , then:

Append the character i to string Y

Otherwise ignore it

8.Repeat the process

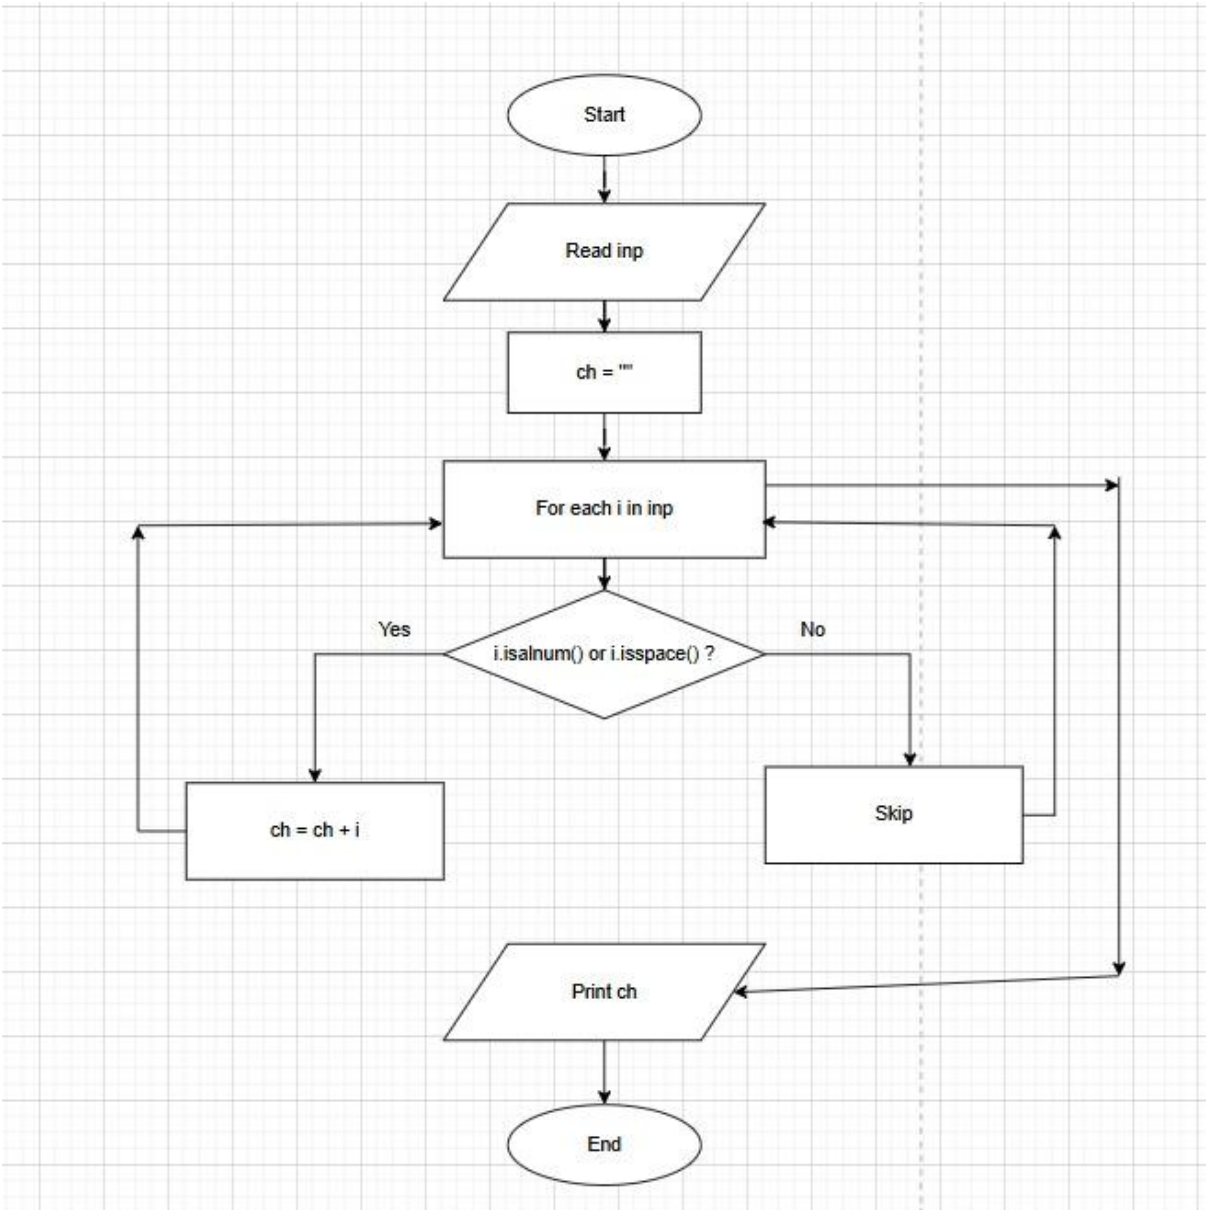
Continue steps 4–6 until all characters of the string X are processed.

9.Display the result

Print the final string Y which contains no punctuation marks.

10.Stop

FLOWCHART:



Start
Read inp
ch = ""
For each i in inp
Yes
i.isalnum() or i.isspace() ?
No
ch = ch + i
Skip
Print ch
End

10.1.1. Remove Punctuations from a String
07:08
Write a Python program to remove all punctuation marks from a given string and print the resulting string.
Punctuation marks are special characters that are not letters, digits, or spaces.
The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.
Input Format:
• Single line contains a string (may include letters, digits, spaces, and punctuation marks).
Output Format:
• Print the string after removing all punctuation marks.
Note:
• Refer to sample test cases for better understanding.
