NIRMAYEE S. KADAM PRN-25070521134 SECTION-C1

EXPERIMENT-10.1.2 REVERSE A STRING

ALGORITHM:

1. Start the program.
2. type a word or sentence.
3. Take that input and store it.
4. Create an empty string to hold the reversed result.
5. Go through the input from the last letter to the first.
6. Add each letter one by one to the new string.
7. After finishing, we will have the reversed string.
8. Show the original string.
9. Show the reversed string.
10. End the program.

10.1.2. Reverse a String
07:02
Write a Python program that prints the reverse of a given input string. The program uses a reverse_string() function that takes a string as input and returns its reversed string.
Input Format:
• The program prompts "Enter a string: " and reads a string representing the string to be reversed.
Output Format:
• The first line prints the original string, in the format:
Original String: <input_string>
• The next line prints the reversed string, in the format:
Reversed String: <reversed_string>
Sample Test Cases
