NIRMAYEE S. KADAM PRN-25070521134 SECTION-C1

EXPERIMENT-11.1.2 SUM OF DIGITS USING RECURSION

ALGORITHM:

Step 1: Start the program

Step 2: Define a function sum_of_digits_recursive(n)

Step 3: Check the base condition

→ If n == 0, return 0

Step 4: Otherwise (recursive case)

Step 4.1: Find last digit

→ digit = n % 10

Step 4.2: Call the function again with remaining number

→ sum_of_digits_recursive (n // 10)

Step 4.3: Add digit to recursive result

→ return digit + sum_of_digits_recursive(n // 10)

Step 5: Take input number from user

Step 6: Call the recursive function and store result

Step 7: Print the result

Step 8: End the program
