EX 6.1.2-FACTORIAL OF NUMBER

ALGORITHM:

1. **Start:** Take the input number n.
2. I**nitialize**: Create a variable and set its initial value to 1.
3. **Loop**: For every number i starting from 1 up to and including n:

- Multiply the current value of factorial by i.
- Update factorial with this new product (factorial = factorial * i).

4. **Result:** After the loop finishes, the value stored in factorial is your final answer.
5. **Output:** Print the result.
