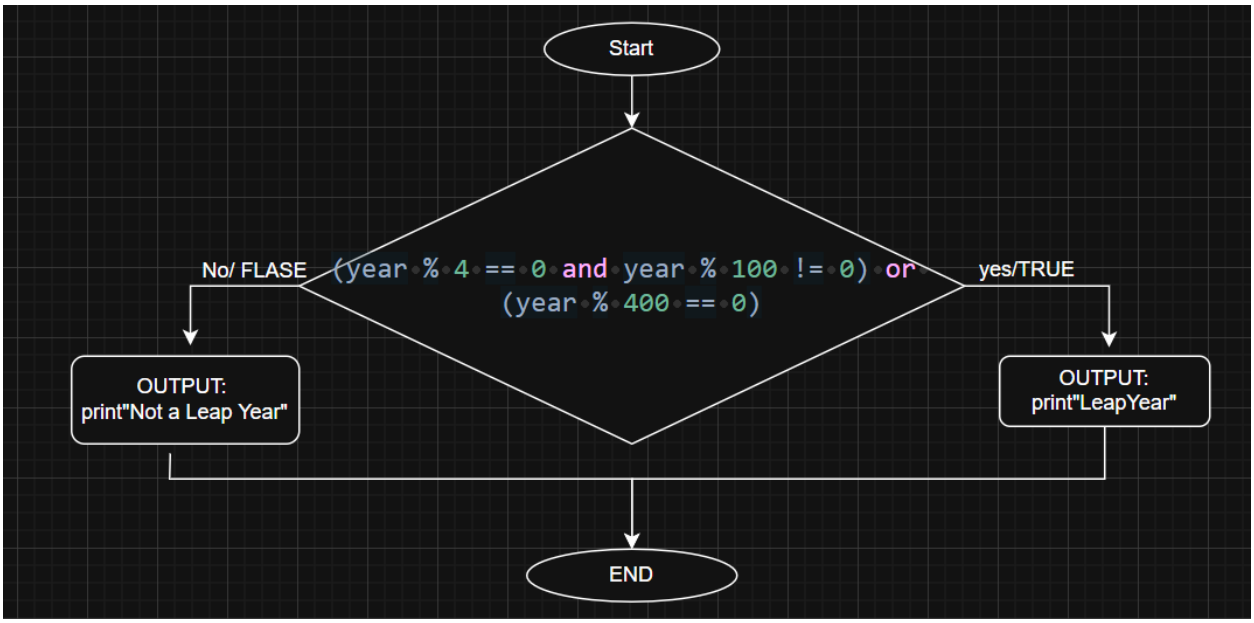
NIRMAYEE S. KADAM PRN:25070521134 SEC-C1

ALGORITHM:

1. Start.
2. Input: Read the integer value for the year from the user.
3. Condition 1: Check if the year is divisible by 4.
4. If it is not divisible by 4, it is not a leap year.
5. Condition 2: If it is divisible by 4, check if it is also divisible by 100.
6. If it is divisible by 4 but not by 100, it is a leap year.
7. Condition 3: If it is divisible by both 4 and 100, check if it is divisible by 400.
8. If it is divisible by 400, it is a leap year.
9. Otherwise, it is not a leap year.
10. Output: Print "Leap year" or "Not a leap year" based on the results above.
11. Stop

FLOWCHART:



Start
(year % 4 == 0 and year % 100 != 0) or (year % 400 == 0)
No/ FLASE
yes/TRUE
OUTPUT:
print"Not a Leap Year"
OUTPUT:
print"LeapYear"
END

5.1.1. Leap Year Checker
19:54
Write a Python program that prompts the user to enter a year. The program should determine if the year is a leap year or not and print the appropriate message.
Input Format:
• A single line contains an integer representing the year.
Output Format:
• Print "Leap year" if it is a leap year. Otherwise, print "Not a leap year".
Explorer
leapYear.py
Submit
Debugger
year = int(input())
if (year % 4 == 0 and year % 100 != 0) or (year % 400 == 0):
print("Leap year")
else:
print("Not a leap year")
